EinScan Trak

Wireless Marker-Free Tracking System

One System, Two Work Modes

Choose the right setup for your applications—detachable, easy to calibrate,and ready with one-click startup. Enables seamless switching and flexible combination of tracking mode and handheld scanner mode, supporting real-time adjustment during scanning and cross-mode resolution merging.

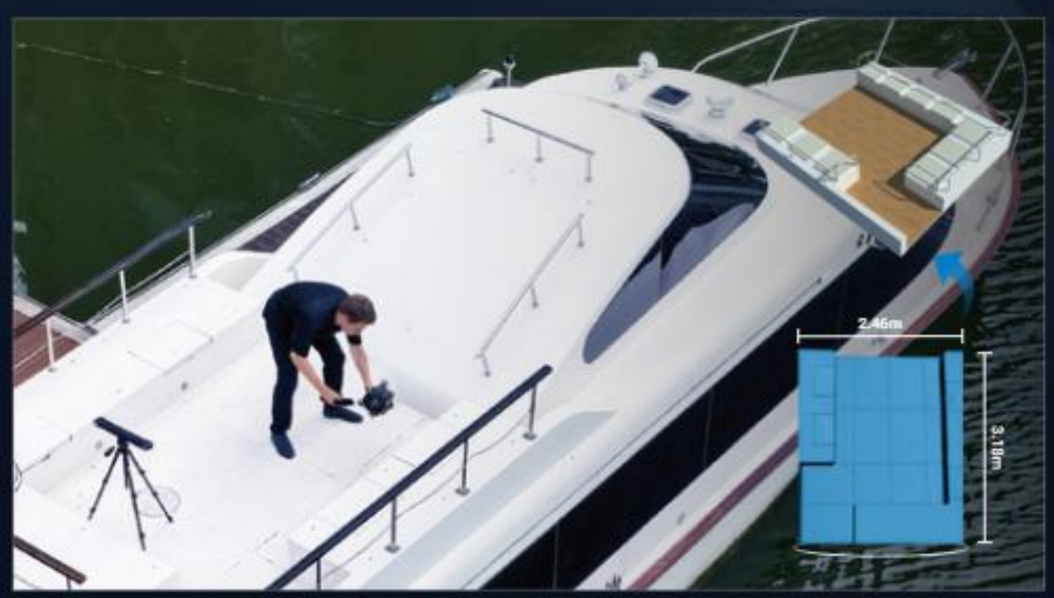

Wireless Freedom, Higher Efficiency

Equipped with Wi-Fi 6 module supports wireless scanning. Connects via an independent LAN and pairs automatically at startup. Enjoy 15m³ ultra-large tracking volume, giving you more freedom to move, capture, and create with higher efficiency.

High-definition. True-color.

5MP HD texture scanning accurately captures object colors and material details. It breaks the stereotype that laser tracking 3D scanning lacks color, bringing the efficiency of tracking systems to cultural heritage, research, and other fields.

Adaptable to Every Task

Ideal for Various Materials
Scan black and reflective surfaces (e.g., car rims) effortlessly without any data loss.

Multi-Environment Adaptability
Reliable scanning outdoor & indoor, supports scanning under strong outdoor light up to 110,000 lux.

Specification

	EinScan Trak
Volumetric accuracy	Up to 0.1 mm
High-speed scan	Included (19 + 19 crossed laser lines)
Detailed scan	Included (7 parallel laser lines)
Deep pockets scan	Included (single line)
Resolution	0.05 ~ 10 mm
Scan Speed	2,630,000 points/s
Max. FOV	Tracking mode: 4796 × 4174 mm @4000mm; Handheld scanner mode: 547 × 463 mm @500mm
Net weight	Tracker: 1.02 kg; Spherical scanner: 1.46 kg; Handheld scanner: 0.48 kg
Certifications	CE, FCC, ROHS, WEEE, FDA, SRRC, IP50

EinScan Libre

All-in-One Laser 3D Scanner: Wireless, Markerless, Full-Color

Cut the Cord, Go Wireless

5.5-inch OLED display: Capture, view, and manage your scans effortlessly with its user-friendly touchscreen UI.

Embedded computing system: Scan and process independently, with all functions built into the device—no laptop required.

Rechargeable batteries: No time for downtime? Just reload and keep scanning. Slide your batteries into the convenient charging dock and be ready to scan at all times.

Brains Behind the Speed

Powerful NVIDIA processor: The integrated Jetson Orin NX 16GB, 8-core CPU and Ampere GPU with 1024 CUDA cores delivers fast data processing.

1TB SSD: Room to roam. With expansive storage, you can scan freely without worrying about running out of space—whether high-res models or hefty projects.

All Modes On Deck

Switch between the EinScan Libre's three versatile scan modes to cover object sizes ranging from 0.1m to over 10m. These IR (infrared) and laser modes help the scanner adapt to all kinds of materials, whether you're indoors or outdoors in direct sunlight.

Lifelike Color Reproduction

Experience high-resolution color capture with the EinScan Libre. Equipped with a 48MP color camera, it delivers lifelike color fidelity, capturing every detail with clarity and vibrant colors. The EinScan Libre ensures your scans reflect the full richness of the scene or object you're scanning.

Technical Specification

	EinScan Libre
Light Source	Infrared VCSEL, IR Laser Lines, Blue Laser Lines
Volumetric Accuracy	Up to 0.04 + 0.06 mm/m
Point Distance	0.5 ~ 10 mm (IR Rapid & IR Adaptive Mode) / 0.05 ~ 3 mm (Laser HD Mode)
Scan Speed	Up to 4,500,000 points/s
Align Mode	Feature / Texture / Hybrid / Markers / Global Markers

EinScan Rigil Series

The Tri-Mode Laser 3D Scanner

DESIGN AWARD 2026

Triple Work Modes

Standalone Mode: No PC connection required, all scanning and processing tasks are completed directly on the hardware, delivering exceptional portability and ease of use.

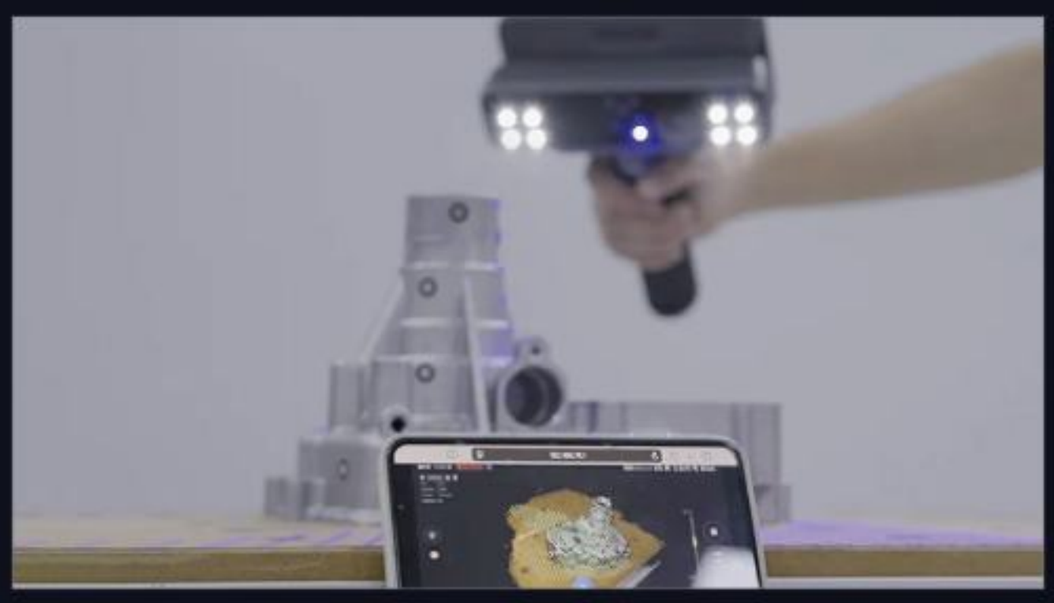

Wireless PC Mode: Leveraging built-in Wi-Fi 6, this mode enables seamless wireless scanning and allows connection to a powerful computer, optimizing performance for complex tasks and large data volume.

Wired PC Mode: Maintaining availability and maximum scanning speed and data volume in complex network environments.

Hybrid Light Source

2 separate groups of cameras are specifically designed to capture different light sources respectively.

- Blue laser lines
- VCSEL infrared

Wireless Workflow

Wireless scanning: Without connecting to PC
Wireless transfer: Data sharing to SHINING 3D Cloud
Wireless screen casting: Display on a second screen

Reliable Product Design

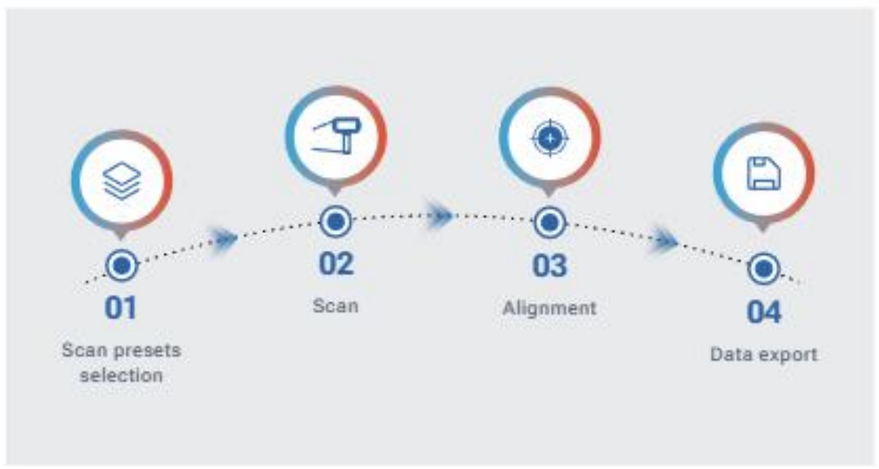

- Switchable Blue Laser Lines / 19+19 Crossed Laser Line / 7 Parallel Laser Lines
- Infrared VCSEL
- All-in-one Powerful Hardware / 2 Separate Groups of Cameras and Projectors / 6.4" 2K AMOLED Touchscreen / 32GB DDR RAM, 32GB eMMC+1TB SSD ROM / 2*6000mAh Relaceable Batteries

Specification

EinScan Rigil Series	
Work mode	Wireless Standalone | PC-Wireless | PC-Wired
Light source	Blue laser | IR VCSEL
Scan speed	Laser HD Mode: up to 4,800,000 points/s; IR Mode: 16,000,000 points/s
Alignment mode	Global Markers / Markers / Features / Texture / Hybrid
Scan mode	Laser HD | IR Rapid
Resolution	Laser HD Mode: 0.05 ~ 10 mm | IR Rapid Mode: 0.2 ~ 10 mm
Working distance	Laser HD Mode: 170 ~ 550 mm | IR Rapid Mode: 160 ~1500 mm

EinScan Medixa

All-in-One 3D Scanner Creates for O&P Care:
Efficient, Precise, Comfort

Tailored Workflow

With an intuitive, step-by-step interface, EinScan Medixa enables clinicians without 3D scanning experience to operate efficiently, reducing appointment times.

Versatile & Personalized Scan Presets

EinScan Medixa features multiple pre-configured scan presets, customized for a widerange of O&P applications.

Flexible Integration & Customization

EinScan Medixa supports smooth data transfer with hospital ordering systems and design portals. Customizable features enable tailored clinical workflows and branded experiences, enhancing integration within varied healthcare environments.

Movement Compensation

Advanced algorithms compensate for slight movement from the patient during scanning, especially when capturing 3D data of infant heads for cranial helmets or torsos affected by breathing.

Technical Specification

	EinScan Medixa
Scan Presets	Face, Cranial, Torso, Upper limb, Lower limb, Feet, Socket, Seating, Foam box
Light Source	White light / Infrared VCSEL
Point Distance	0.2 ~ 3 mm
FOV	White light: 475 × 360 mm / Infrared VCSEL: 1090 × 1260 mm
Texture Camera Resolution	5 MP
Alignment Modes	Feature / Texture / Hybrid / Markers / Global Markers

EINSTAR Series

EINSTAR VEGA

Wireless All-In-One 3D Scanner

All-In-One System

· Built-in Computing
· Internal Data Archiving

Wireless Solution

· Wireless scanning without connecting to PC
· Wireless transfer, data sharing in SHINING3D Cloud
· Wireless projection, data display on a second screen

Scan Anywhere Anytime

· Outdoor Scanning under Sunshine
· Scan at Night without Limitation

Technical Specification

	EINSTAR Vega	
Scan Mode	HD Mode	Fast Mode
Light Source	Infrared MEMS	Infrared VCSEL
Point Distance	0.5 ~ 3 mm	0.5 ~ 10 mm
Working Distance	100 ~ 350 mm	270 ~ 1500 mm
IR Camera Resolution	2 MP	1.3 MP
Color Camera Resolution	48 MP	

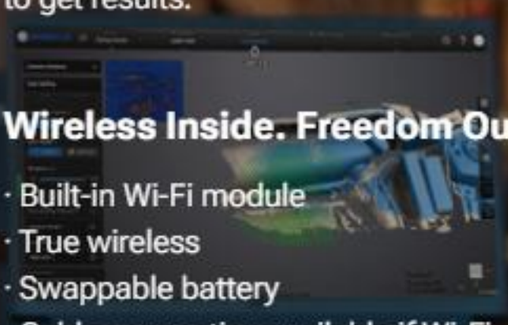

PRECISE3DM

EINSTAR ROCKIT

Rock-it in your pocket

Marker-Free Laser Scanning

Skip the markers — scan feature-rich objects effortlessly.Quick to set up, faster to get results.

Wireless Inside. Freedom Outside.

· Built-in Wi-Fi module
· True wireless
· Swappable battery
· Cable connection available if Wi-Fi interference occurs

Pocket Size, Rocket Speed

· Sleek and solid build with a refined finish
· Up to 90 fps with marker alignment
· High-quality point cloud with clean and consistent output

Technical Specification

EINSTAR Rockit	
Scan Mode	Laser HD / IR Rapid
Light Source	19 + 19 Cossed Laser Lines / 7 Blue Laser Parallel Lines / IR VCSEL
Resolution	Laser HD: 0.05 ~ 10 mm / IR Rapid: 0.2 ~ 10 mm
Scanning Speed	Laser HDUp to 2,800,000 points/s / IR RapidUp to 4,800,000 points/s
Working Distance	19 + 19 Cossed Laser Lines100 ~ 600 mm / 7 Blue Laser Parallel Lines100 ~ 400 mm / IR Rapid160 ~ 1400 mm
Max. FOV	19+19 crossed lines: 545 x 620 mm / 7 parallel lines: 355 x 425 mm / IR: 1170 x 1385 mm
Outdoor Scanning Environment	Laser HD: Below 110,000 Lux / IR Rapid: Below 70,000 Lux

EINSTAR 2

Still EINSTAR, Even Better

17 Parallel Laser Lines

· High-resolution detail capture for small objects
· Improved performance on reflective and metallic surfaces
· Optimized capability for deep-hole scanning

IR VCSEL

· Enhanced performance on black surfaces and outdoors
· Efficiently captures large objects with abundant detail in a single scan

True Wireless

swappable battery provides up to 3 hours of uninterrupted scanning

No Spray, No Delay

EINSTAR 2 can scan black or reflective objects directly, no spray required.

Technical Specification

	EINSTAR 2
Scan Mode	Laser HD / IR Rapid
Light Source	17 Blue Laser Parallel Lines / IR VCSEL
Resolution	Laser HD: 0.05 ~ 10 mm / IR Rapid: 0.2 ~ 10 mm
Scanning Speed	Laser HD: Up to 2,500,000 points/s / IR Rapid: Up to 4,800,000 points/s
Working Distance	Laser HD: 100 ~ 600 mm / IR Rapid: 160 ~ 1400 mm
Max. FOV	Laser HD: 490 × 580 mm / IR Rapid: 1170 × 1385 mm
Outdoor Scanning Environment	Laser HD: Below 110,000 Lux / IR Rapid: Below 70,000 Lux

ShiningSpace

A Digital Platform for Real-World 3D Assets

Building on SHINING3D Cloud, ShiningSpace is an upgraded, open digital platform for real-world 3D assets. It goes beyond cloud storage by bringing 3D asset storage, viewing, management, editing, sharing, and reuse together in one connected space.

Key Features

Free Storage

Every account includes 5 GB of private storage.
Approved public models do not count toward the limit.

3D Viewer/ 3DGS

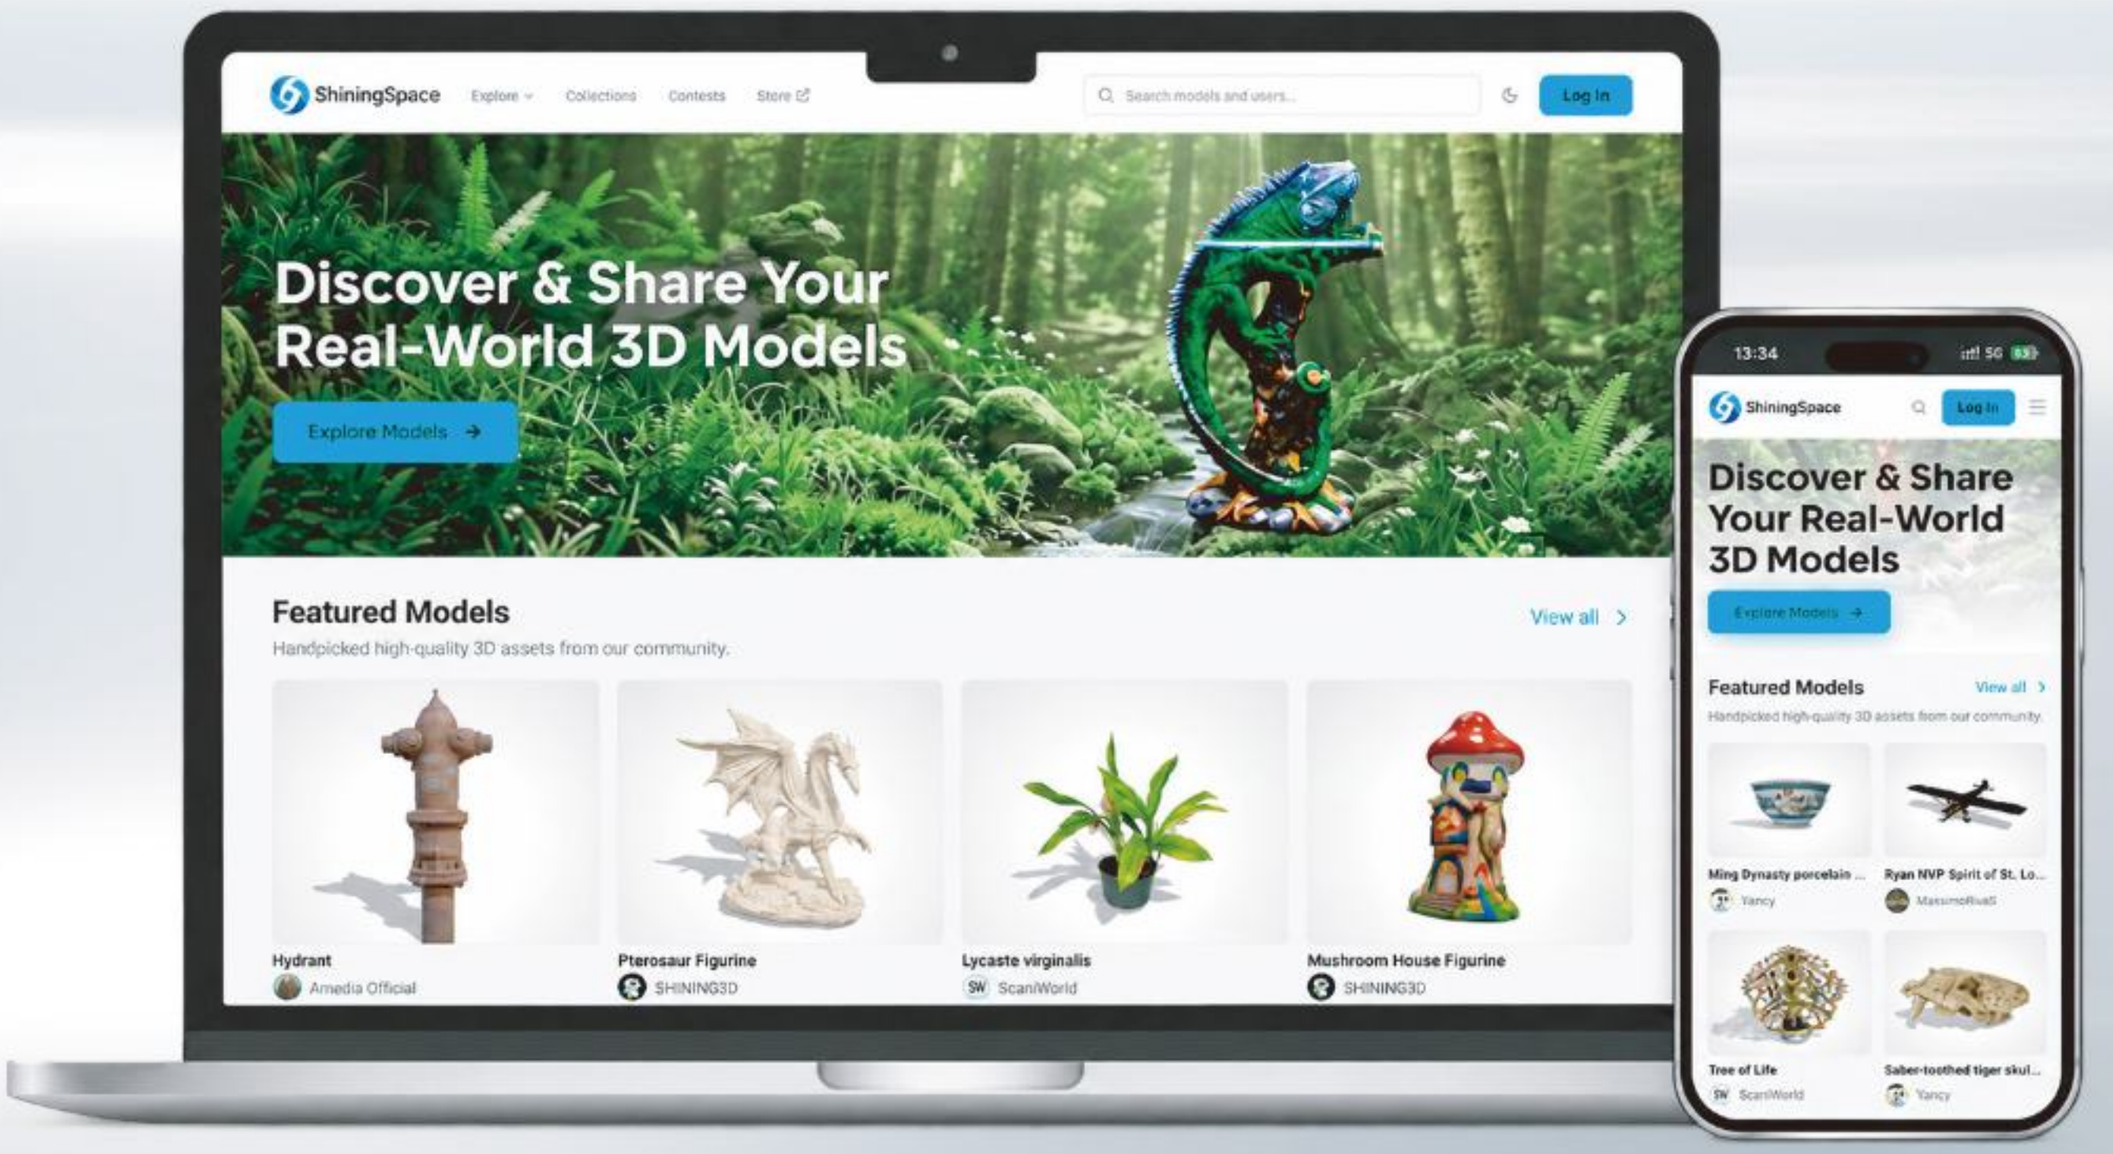

Explore models in Texture, Point Cloud, Wireframe, X-Ray, and other display modes.

Controlled Sharing

Choose public, private, or view-only access and decide whether downloads are allowed.

Vibrant Community

Join the community to showcase your work and enter contests to grow its value.

3D Inspection Software

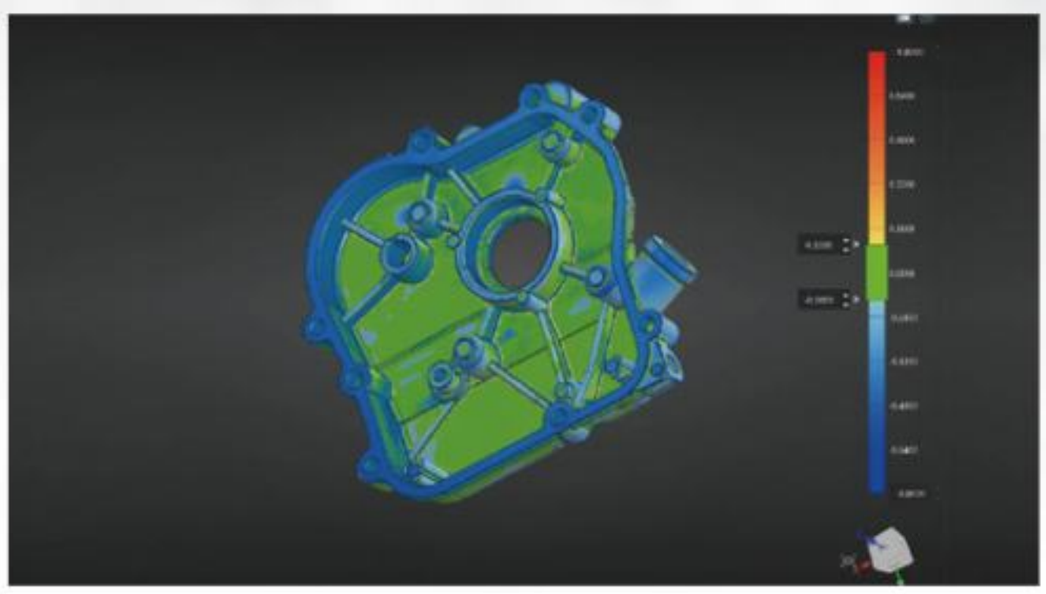

EXMeasure

EXMeasure brings with PTB-certified measurement tools into a clear, workspace. Import scan and CAD data, align models, analyze deviations, evaluate key dimensions and GD&T inspection, and create professional reports in one streamlined workflow.

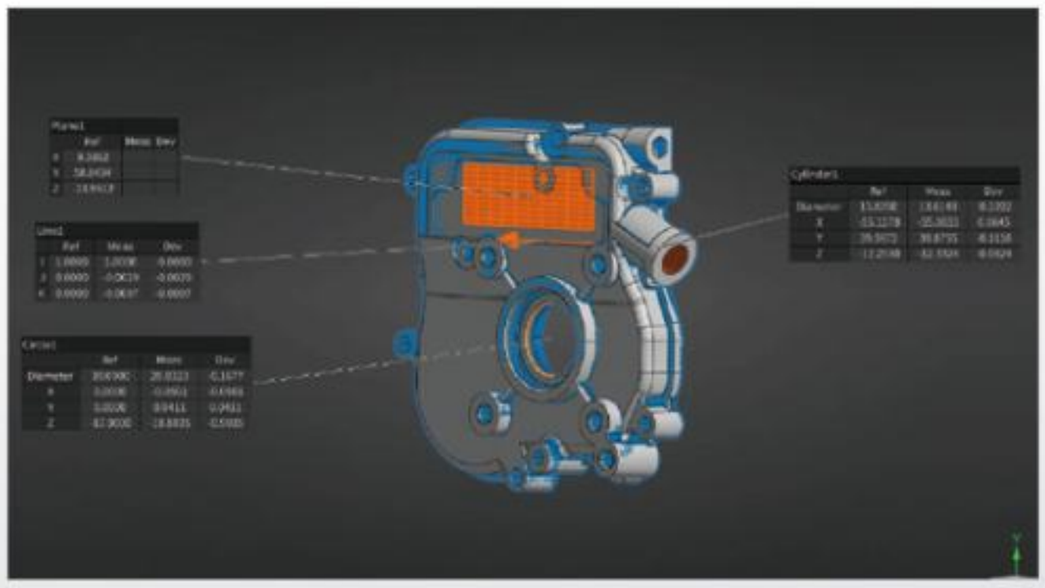

One-Click Best Fit

A tile-based interface keeps core functions visible and easy to access, helping operators complete routine measurement tasks with fewer steps.

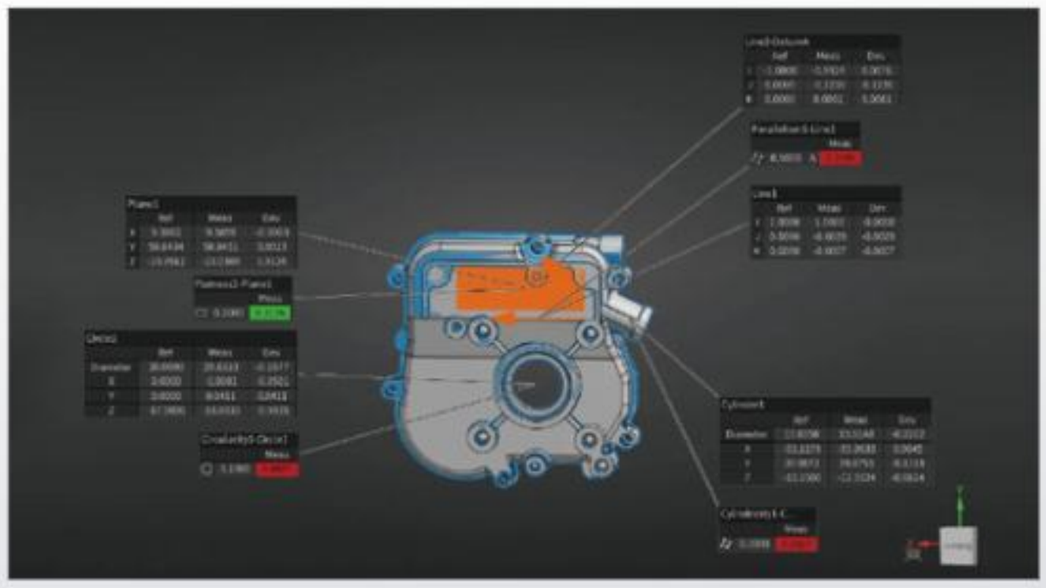

Full-Field 3D Comparison

Compare measured scan data with reference models, generate intuitive color maps, and customize tolerance bands for immediate pass/fail interpretation.

Essential GD&T Evaluation

Set datum, Inspect straightness, flatness, circularity, cylindricity, parallelism and perpendicularity, with clear in-tolerance and out-of-tolerance results.

Versatile Feature Construction

Create points, lines, planes, circles, spheres, cones and cylinders using CAD selection, fitted data or anchored construction methods.

3D Design Software

EXModel

EXModel

EXModel is a powerful bridge that simplifies CAD modeling from 3D scanning to manufacturing. It provides a comprehensive set of tools that enable you to transform mesh into a professional quality CAD solid model in easy steps.

Effortless Mesh Processing
Precision CAD Creation
Enhanced Data Utilization

Effortless Mesh Processing

Precision CAD Creation

Enhanced Data Utilization

Cost-Effective Solution

Streamlined Workflow

Versatile Export Option

Geomagic Design X

Industry leading Reverse Engineering software. Create accurate CAD models from 3D scan data, faster, and more reliably than anything else on the market.

3-10x Faster Path to CAD than Traditional Tools
Heavy-Duty Capabilities for Demanding Projects
Works Seamlessly with Your Existing CAD

Expand your design capabilities

Leveraging existing asset

Doing the impossible

Reduce cost

Texture Mapping Software

BlueStar Mapping

A texture mapping software specially designed for 3D scanners. Through intelligent and semi-automated workflows, it precisely maps multi-angle photos captured by smartphones or DSLR cameras onto 3D scanned models, generating 3D models with high precision, exceptional clarity, and true-color textures.

Universal Compatibility
One-Stop Workflow
High Definition Resolution

- **Low-Barrier Photo Capture**
- **Adaptable**
- **High Definition Resolution**
- **One-Stop Workflow**
- **All-in-One Smart Texturing Suite**
- **Easy to Use**

O&P Software

EXScan O&P

EXScan O&P is a specialized software designed to integrate seamlessly with the EinScan H2 handheld 3D scanner. This powerful solution enhances workflow efficiency, enabling O&P professionals to create precise, custom orthopedic and prosthetic devices with ease.

Intuitive & User-Friendly Workflow
Versatile Scanning Modes
High-Quality 3D Data Output

- **Client Safety & Comfort**
- **Accuracy of Shape Capture**
- **Efficient Justification Process**
- **Faster Client Delivery**
- **Track, Repeat, Duplicate**
- **Portable Clinic Solution**

Application

Automotive

In the realm of automotive modification, parts customization, and repairs, the prevailing challenges often manifest as time-consuming procedures, intricate complexities, and the arduous task of achieving absolute vehicle compatibility. Yet, through the utilization of cutting-edge technology such as the SHINING 3D scanner, a remarkable enhancement is achieved.

Application Fields

Car Retrofitting

Car Seat and Interior Farbrication

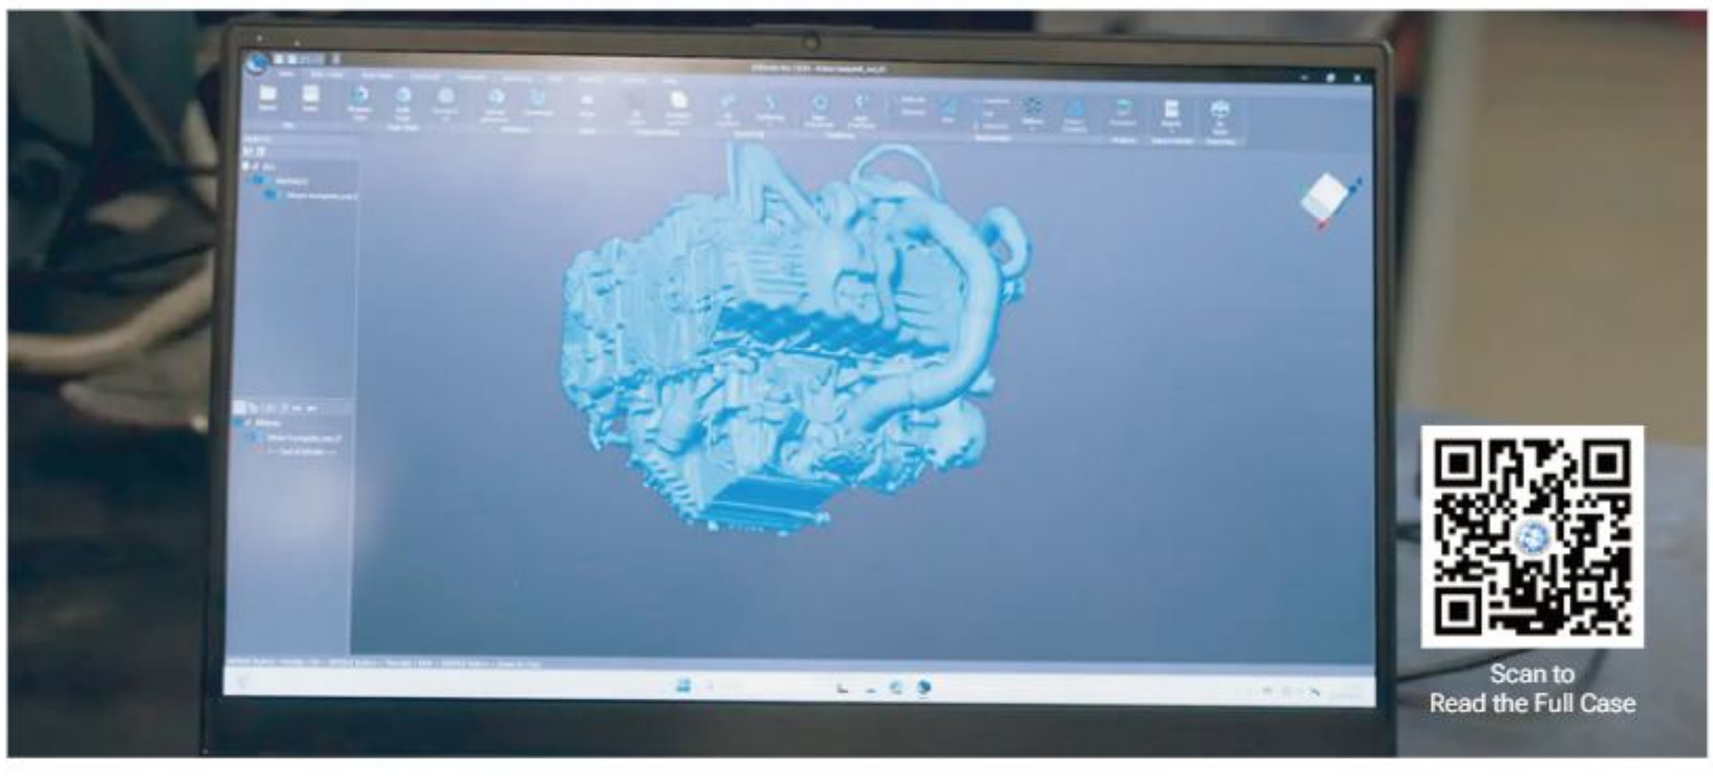

Paint Protective Film and Wrap Customization

Aftermarket Installation

Automotive Crash and Dent Assessment

Design, Build, and Perfect Drift Cars

Manufacturing

The manufacturing industry relies on precision and efficiency in creating high-quality products. SHINING 3D's EinScan series scanners offer fast, accurate 3D scanning solutions, enabling manufacturers to streamline product design, reverse engineering, and quality control processes, enhancing overall productivity and reducing costs.

Application Fields

- Reverse Engineering
- Rapid Prototyping
- Product Development and Design
- Tooling and Mold Making

3D Scanning Textile for 3D Milling

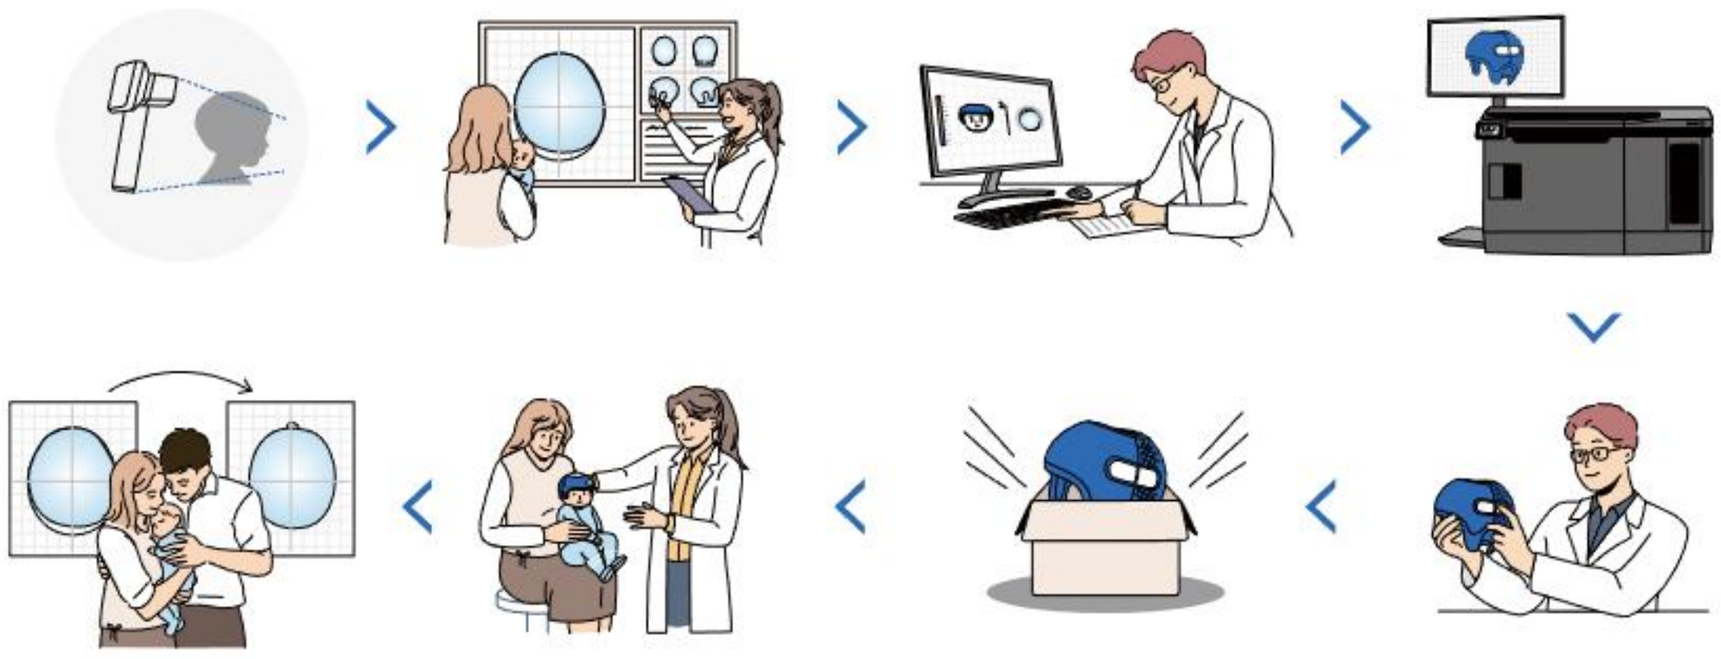

Healthcare

SHINING 3D's EinScan series offers advanced 3D scanning solutions that enable accurate digital modeling for prosthetics, orthotics, and surgical planning, enhancing patient care through customized, precise, and efficient treatments.

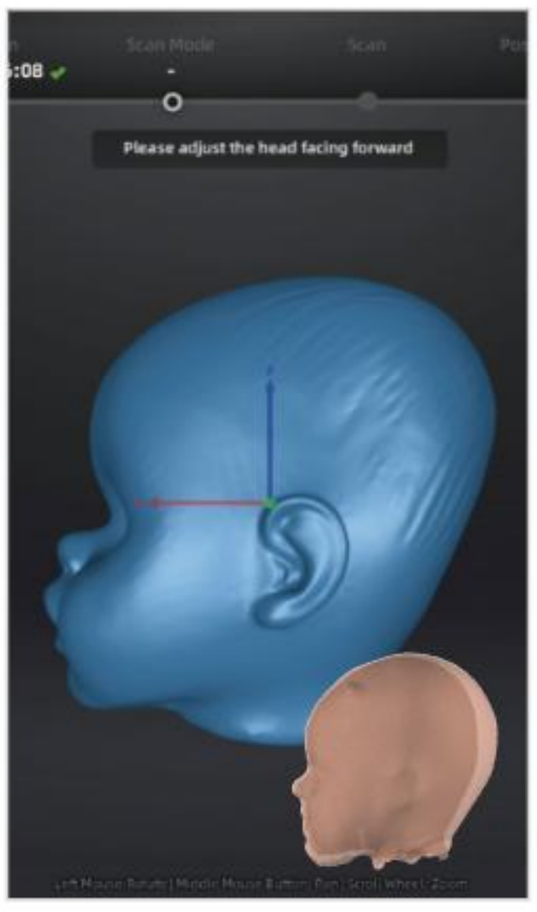

Application Fields

- Prosthetics and Orthotics
- Surgical Planning
- Rehabilitation and Physical Therapy
- Cosmetic and Reconstructive Surgery
- Orthopedic Care
- Wound Care and Burn Treatment

Solution for Infant CRO

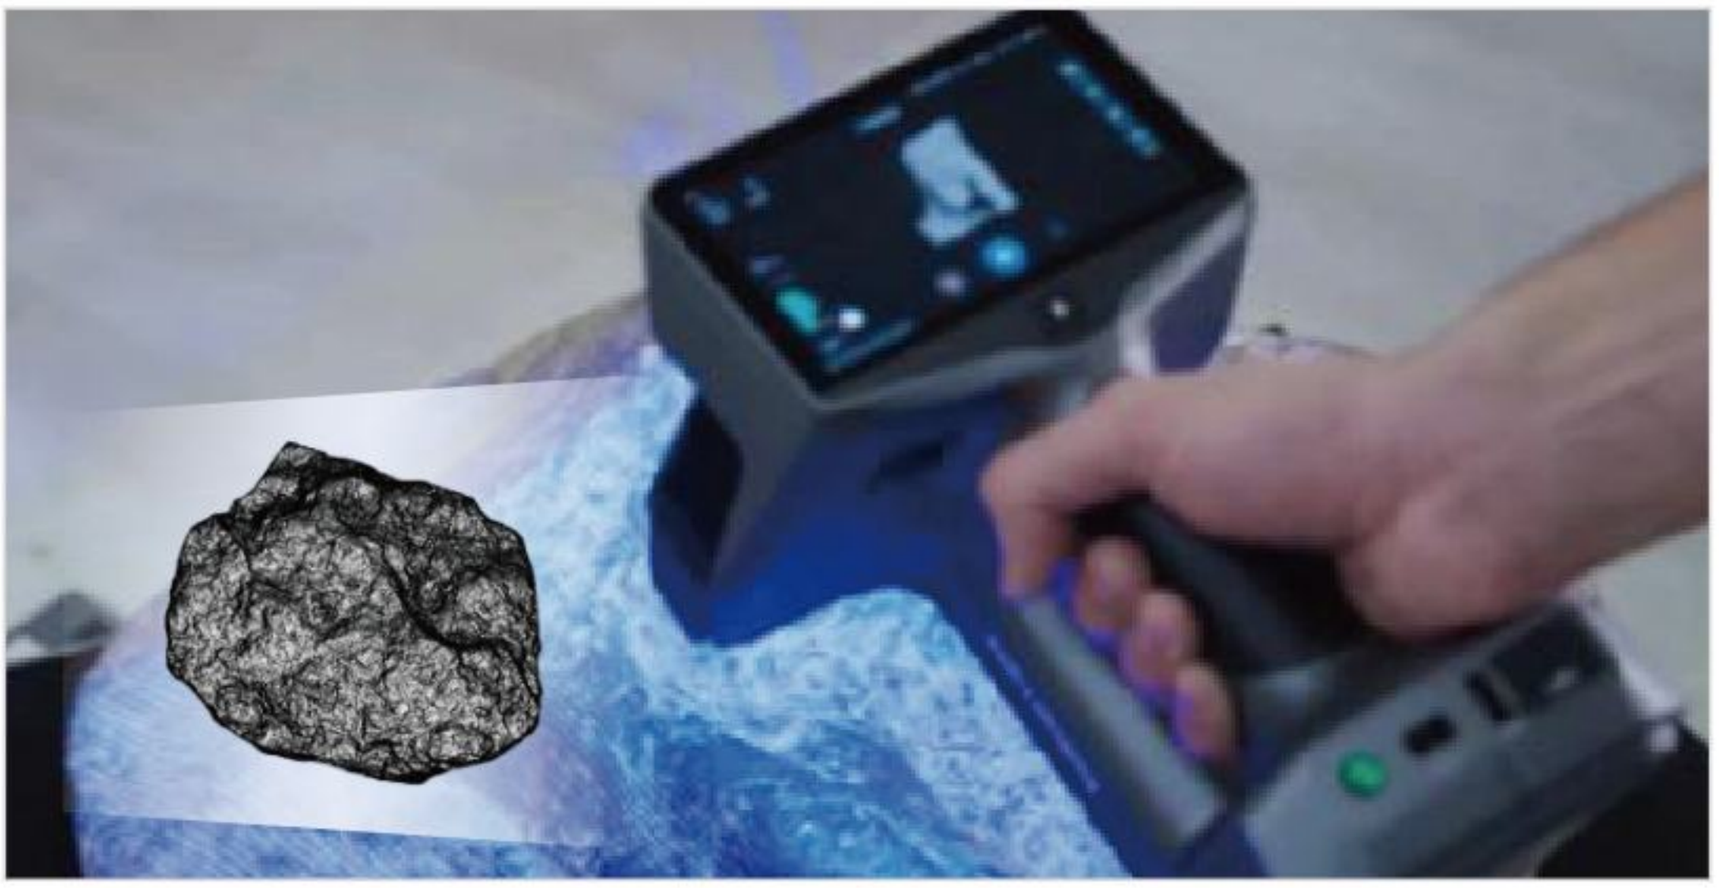

Culture & Art

The Culture & Art industry encompasses the creation, preservation, and appreciation of art and cultural heritage. In this field, 3D scanners are vital for digitally preserving artifacts, creating detailed replicas, and enhancing virtual exhibitions, allowing for accurate restoration, study, and global accessibility of cultural assets.

Application Fields

- Preservation of Cultural Heritage
- Restoration of Artworks
- Virtual Display
- Cultural and Art Creative Products Creation
- Film and Game Creation

Digital Preservation at The Amelia Museum

Research & Education

The Research & Education industry focuses on advancing knowledge and learning across various disciplines. 3D scanners in this field are used for creating accurate digital models, enabling detailed analysis, preservation of artifacts, and enhancing interactive learning experiences by providing students with immersive, hands-on exploration of complex structures.

Application Fields

- Digital Archiving and Data Collection
- Teaching and Learning Tools
- Anatomical and Biological Studies
- Engineering and Designing Studies
- Geological and Environmental Studies
- Archaeology

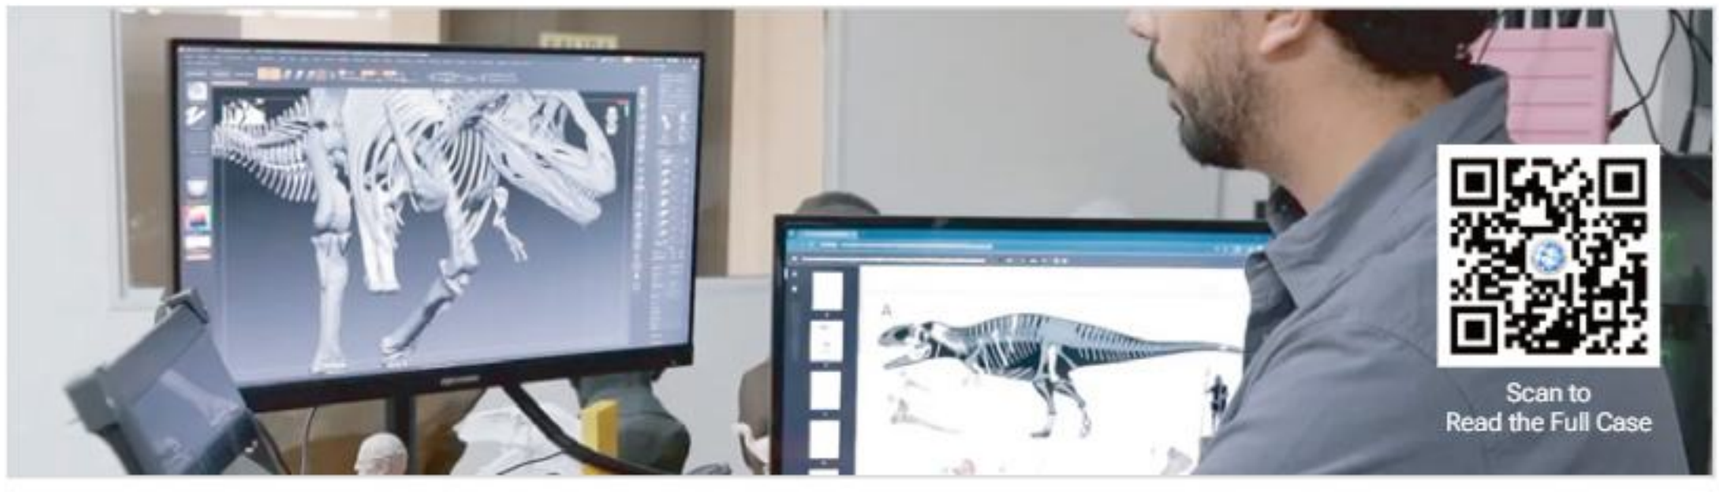

Solutions for WorldSkills Competition

Solutions for K12 Education

Solutions for Academic Research

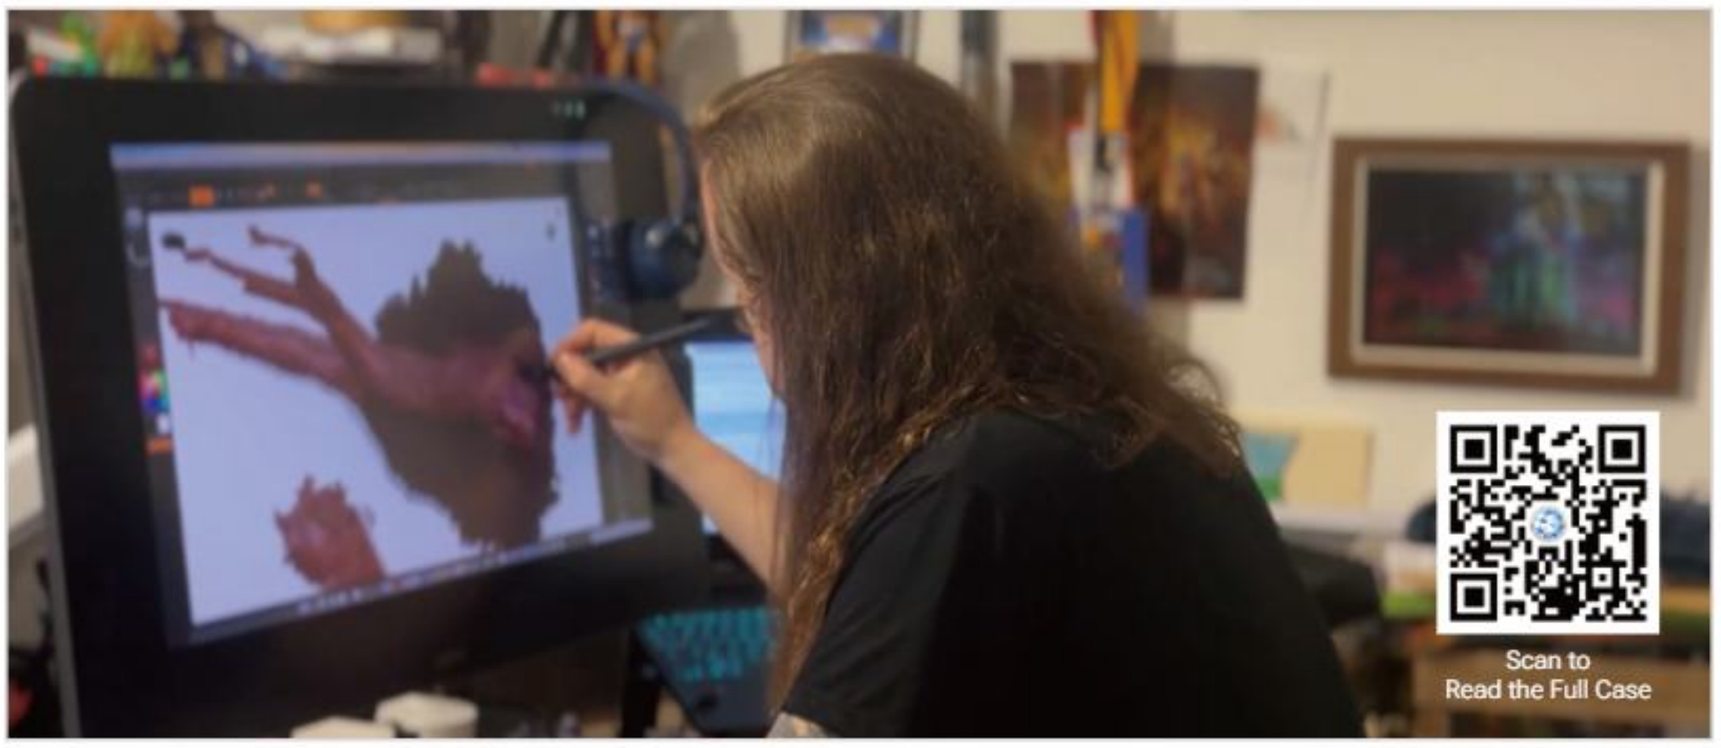

CGI

The CGI (Computer-Generated Imagery) industry creates visual content using computer graphics for films, games, and simulations. 3D scanners play a crucial role by capturing real-world objects' precise shapes and textures, enabling accurate and detailed digital models. This enhances realism and efficiency in CGI projects.

Application Fields

- VR and AR
- Character Modeling
- Object Scanning and Props
- Environment and Set Creation
- Film and Gaming Design and Animation
- Special Effect

Creating Digital Art

Creating Digital Twins

Consumer Good

The Consumer Goods industry focuses on products sold directly to consumers, such as food, clothing, and electronics. 3D scanners in this sector enable precise product modeling, enhancing design accuracy and customization. They streamline quality control and create detailed digital prototypes for marketing and production.

Application Fields

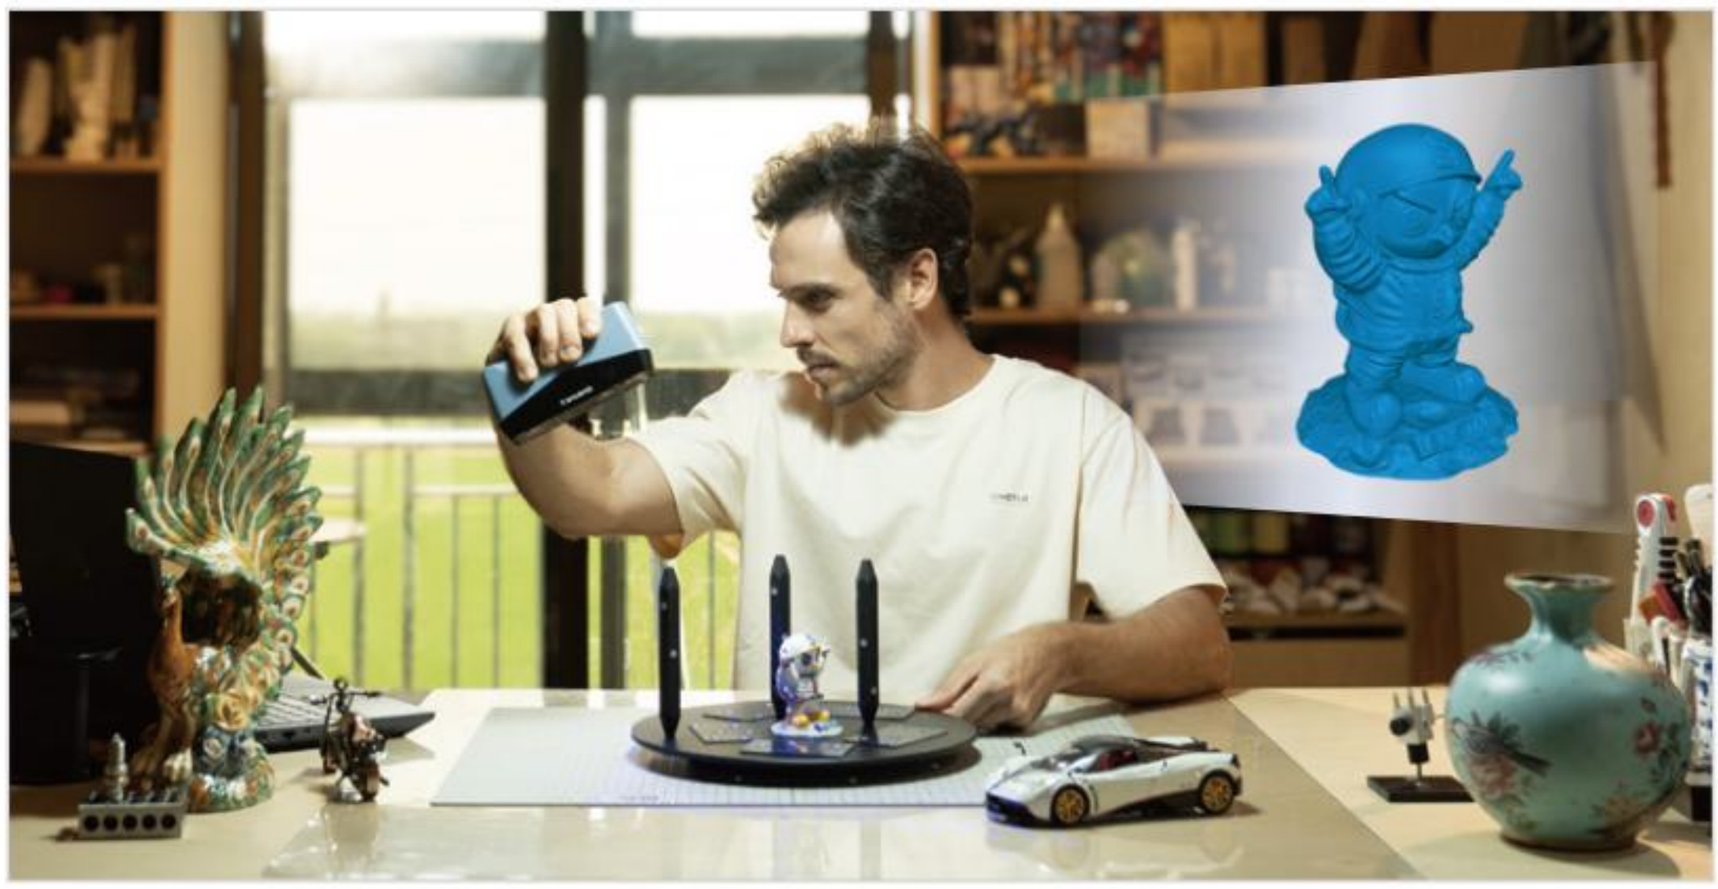

Product Design and Development

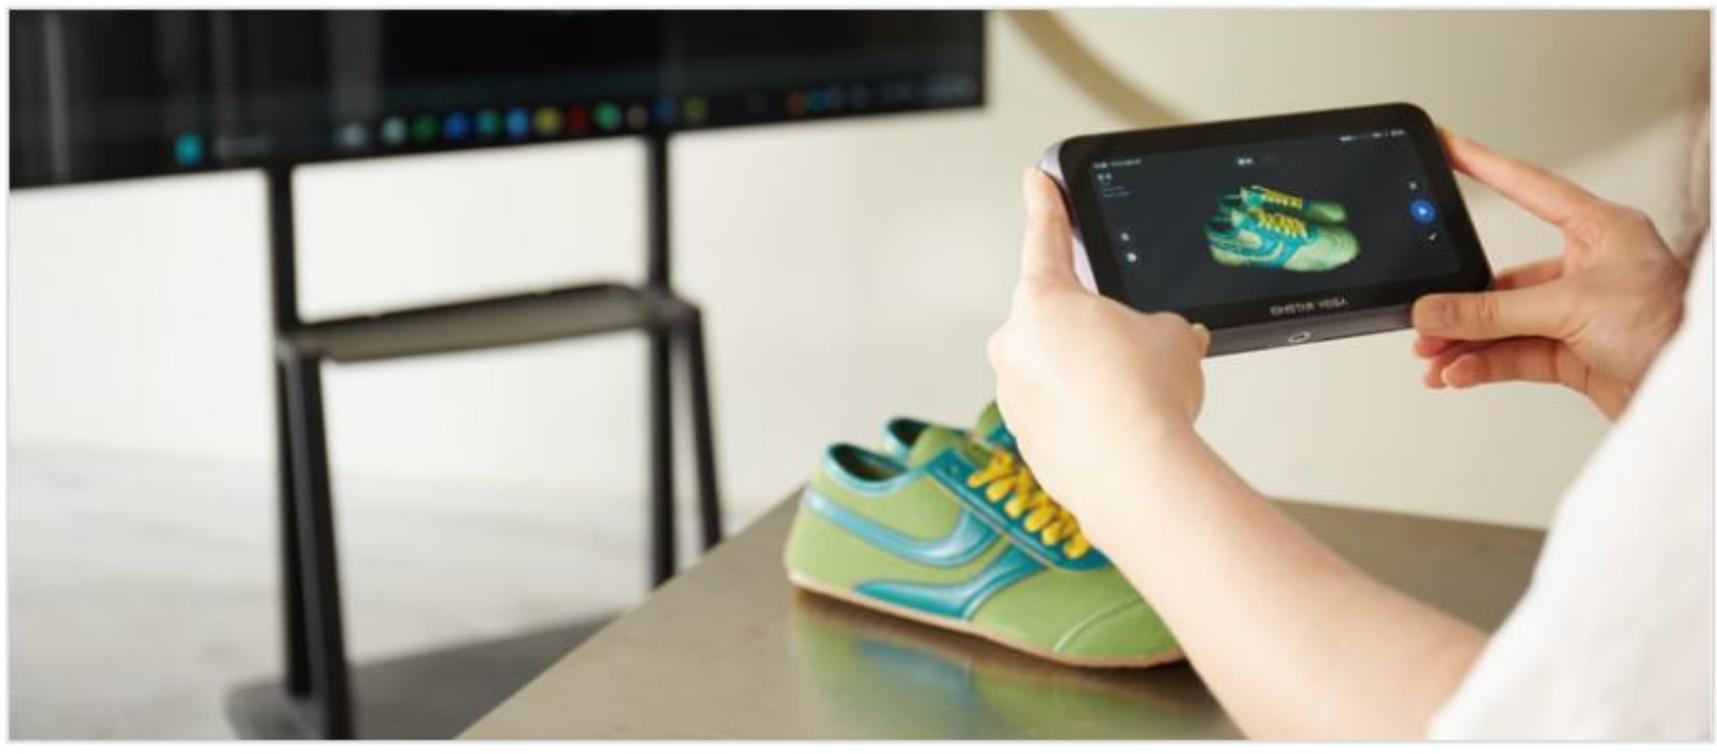

Customization and Personalization

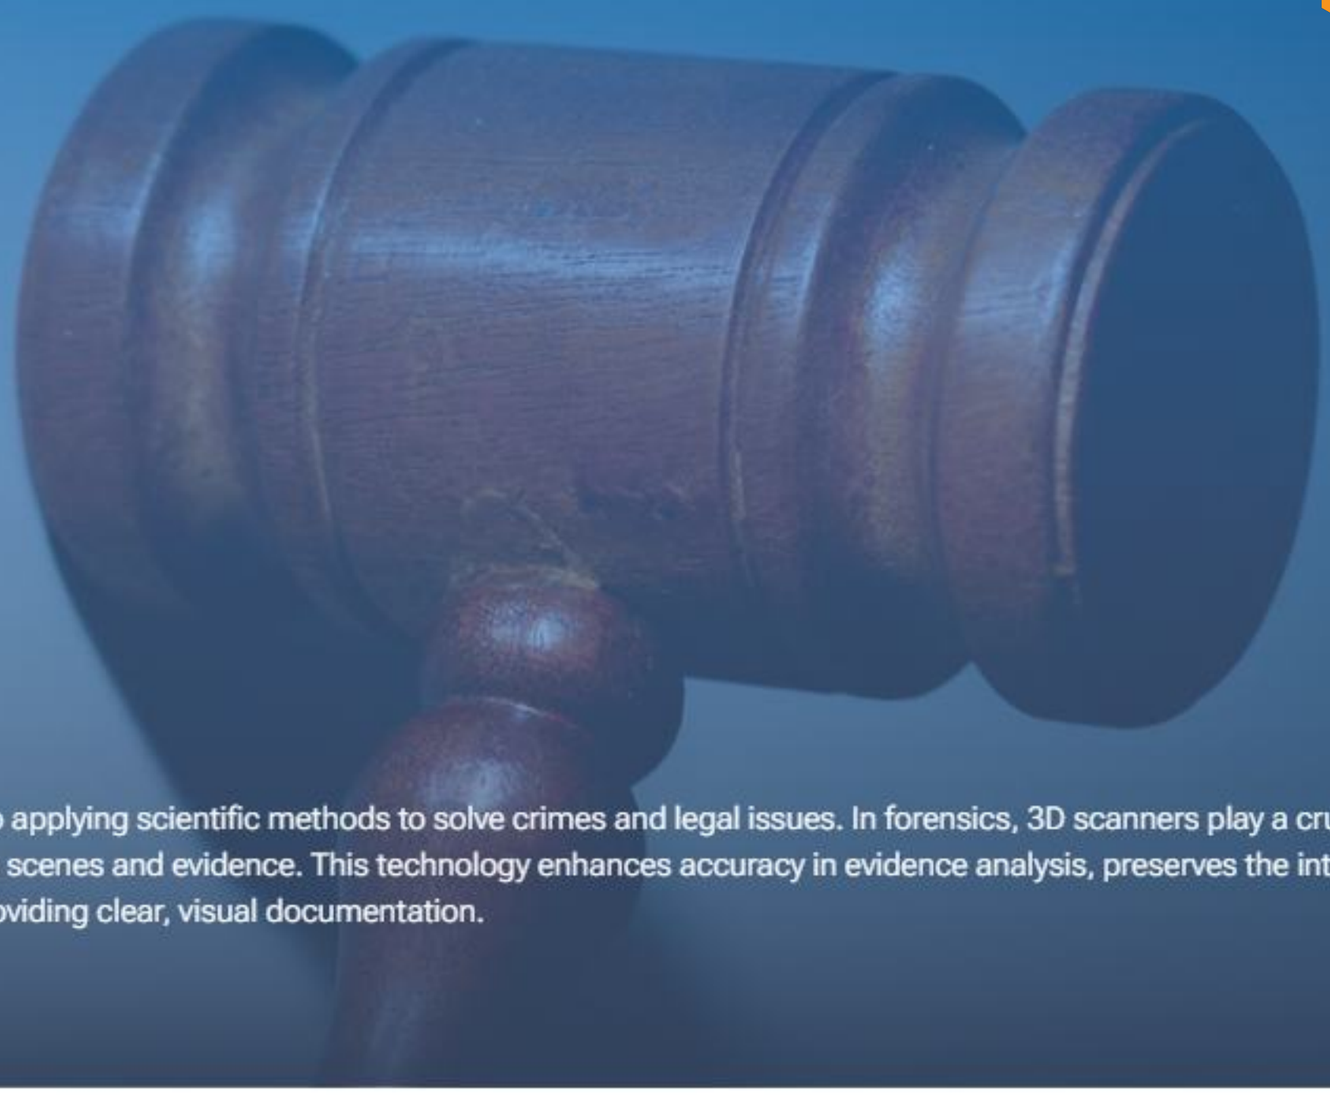

Packaging Design

E-commerce and Virtual Display

3D Scanning for Virtual Display

Forensics

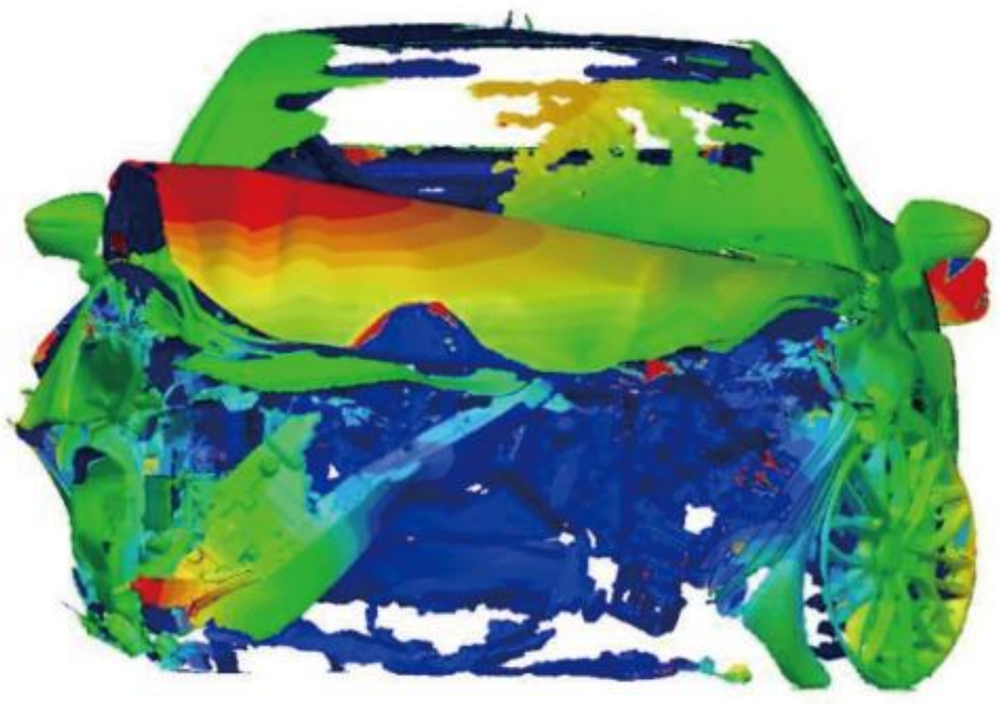

Forensics is a field dedicated to applying scientific methods to solve crimes and legal issues. In forensics, 3D scanners play a crucial role by creating detailed digital reconstructions of crime scenes and evidence. This technology enhances accuracy in evidence analysis, preserves the integrity of the scene, and aids in courtroom presentations by providing clear, visual documentation.

Application Fields

- Crime Scene Documentation and Investigation
- Accident Reconstruction
- Body Wound Analysis
- Digital Archiving of Evidence

Traffic Accident Investigation

About SHINING 3D

Founded in 2004, SHINING 3D is committed to democratize the 3D scanning technology and provide the 3D digitizing solution based on the understanding of customer and market's demand, creating powerful products in ease of use and accessible.

Intellectual Property	Team Size	Scanners Sold
500+	**1,300+**	**200,000+**
SHINING 3D has independently researched and developed a number of core technologies in the 3D field.	SHINING 3D has **1300+** employees, **40%** of which are R&D staff.	SHINING 3D scanners are served to **55000+** users over **10000+** companies in more than **170** countries.

Accuracy Laboratory

The SHINING 3D Accuracy Laboratory is accredited to ISO/IEC 17025 by CNAS. The laboratory is equipped with a comprehensive suite of calibration instruments and conducts calibration and verification services in strict accordance with internationally recognized standards, including VDI/VDE 2634 and ISO 10360. Through these capabilities, the laboratory provides authoritative technical support and reliable quality assurance to partners and customers worldwide.
